SOFTWARE DOWNLOAD AND INSTALLATION

- 1, The software can be downloaded from the official website: www.gamemaxpc.com. Find the corresponding product model "GPU-190 DIGITAL" and download.
- 2, The display's power supply and data communication transmission are both provided by a 9pin USB interface. Before installing the software, please ensure that the wiring is complete.
- 3, Decompress and install the driver software. The default installation location is the C drive.
- 4, During the software installation process, if your antivirus software shows an error message, please allow the installation to proceed.
- 5, The driver software supports Windows 10 and later systems.
- 6, Click the desktop icon and double-click to open the software. If the following interface appears, it means the software is running successfully.

The software allows you to display the CPU and GPU temperature or usage, and can also be set to display them alternately.
